Kunhee Cho (조근호) is a professor of the Department of Management Science, Seoul National University, and a senior research advisor at the Korea Research Institute of Management (KRIAM). He received his B.S. and M.S. degrees from Seoul National University and his Ph.D. from the University of California, Berkeley. He has been a faculty member at Seoul National University since 1992. His research interests include organizational behavior, strategic management, and innovation management. He has published numerous articles in the Journal of Management Science, Strategic Management Journal, and other leading journals in the field. He is also the author of several books, including "Organizational Behavior" and "Strategic Management".

Choi & Kim (2008) are the first to examine the effect of the 2007-2008 financial crisis on the relationship between the size of the firm and the cost of capital. They find that the relationship between the size of the firm and the cost of capital is significantly positive in the pre-crisis period, but it becomes significantly negative in the post-crisis period. This finding is consistent with the hypothesis that the financial crisis has led to a decrease in the cost of capital for large firms, which in turn has led to a decrease in the relationship between the size of the firm and the cost of capital.
