

Many of our engagements involve matters in which our clients face significant public attention. The following is a list of news stories about the firm, our clients, cases and the results we have achieved.

Jason Kang Shares Legal Insights on AI & Emerging Tech at ABA Asia-Pacific Conference

March 4, 2025

The rapid rise of AI and emerging technologies continues to shape the legal landscape, particularly in the evolving Web3 ecosystem. At the ABA International Law Section's 2025 Asia-Pacific Conference, Kobre & Kim's Jason Kang joined industry leaders on February 27 at Singapore Management University to discuss these pressing issues.

As a panelist on "Building a Healthy Web3 Ecosystem: Legal Perspectives on AI and Emerging Technologies," Mr. Kang explored various themes within the cryptocurrency landscape, including key legal considerations in crypto asset recovery, mitigating risks associated to crypto fraud, and the challenges businesses face in navigating this dynamic space.

With innovation advancing at lightning speed, staying ahead of legal risks is more crucial than ever—especially in complex cross-border cases involving large-scale cryptocurrency fraud or devastating cyberattacks that threaten asset recovery efforts.
